

Detect and **avoid collisions** with Seen Safety forklift pedestrian detection system

Simple - Effective - Affordable

The Collective Intelligence Group, in partnership with Seen Safety, brings you the innovative IRIS 860 pedestrian safety system. Through this partnership, the Seen Safety system, which compliments our Forklift iQ360 and Fleet iQ360 products, is now available throughout Australia, the United States and Colombia. The safety of our customers is our main focus and we are excited to be able to offer this product. **Speak to us today about organizing a trial!**

Forklift Pedestrian Detection System

Back-overs are one of the most common types of forklift/pedestrian accident and a Seen Safety's IRIS 860 sensor covering the rear of a forklift is an ideal way to add an additional layer of safety in the blind spot. Seen Safety's new IRIS 860 LIDAR sensor actively detects reflective tape on high-vis safety gear, transforming the standard high-vis vest into part of an active pedestrian detection system for forklifts and other mobile plant.

Mounted Brackets

Seen sensors come with a heavy duty stainless steel mounting bracket which can be attached to vertical, horizontal, or angled surfaces.

Multiple Sensors

Multiple IRIS 860 sensors can be used together to create a larger detection area. One sensor gives 60 degrees coverage, 2 sensors 120 degrees etc.
