XQ360

The Collective Intelligence Group offers leading **fleet data intelligence** to mixed fleets through the X**Q**360 system.

XQ360 has the superior power and efficiency of SSO and API integration to optimize forklift productivity for large-scale end users. XQ360 is a superior system for recording, compiling and presenting data that is critical to carrying out pre-operation checks, performance and utilization level analysis, and damage reports.

With its user-friendly interface, XQ360 can report real-time status of vehicles and driver performance directly to smartphone, tablet, laptop, or desktop computers.

This fully customizable system puts businesses in total control of their fleet operations allowing them to achieve new standards of health and safety compliance, cost efficiency, and accountability.

Driver Access Control

XQ360 allows only licensed, qualified, and trained drivers to operate the vehicles by using a PIN screen entry and RFID cards.

Accident Sensing and Reports

XQ360 is calibrated to recognize low and high level accidents and to report the vehicle, location, and time of the accident. Alerts are sent to supervisors, and vehicles can be placed in safe mode until the supervisor assesses the situation.

OSHA Checklist

XQ360 puts safety first starting from the beginning of the first shift. With an extensive pre-operation vehicle checklist, XQ360 automates a report of completed, incompleted, or failed pre-operation check points.

About X**Q**360

- SSO (Single Sign On)
- API (Application Programming Interface) powerful integration capability
- 7-inch touchscreen with RFID badge or pin access capability
- WiFi, GPS and Cellular connectivity
- No customer infrastructure required
- Customizable safety and control features
- IP65 rated with built-in heater, operational to –30ºC
